RESEARCH PROJECTS

- Inverse imaging from magnitude-only measurements. [code]
 - Phase retrieval using structured sparsity: utilizing underlying structure (such as block and tree sparsities) in images to develop fast and memory efficient algorithms to reconstruct images from absolute-valued Gaussian measurements.
- Image and video super-resolution via ptychography. [code]
 - Developed fast and memory efficient algorithm for super-resolution of multiplexed microscopic images by using sparsity priors.
 - Super-resolution for slowly changing microscopic videos, by utilizing low-rank priors.
- Optimization of shallow ReLU networks. [code]
 - Introduced a novel technique of alternating minimization in the context of training ReLU networks. Convergence analysis for learning networks of ReLUs via alternating minimization and gradient descent.
- Inverse imaging using deep untrained network priors. [code]
 - Algorithmic guarantees for solving inverse imaging problems such as compressed sensing and phase retrieval by using deep untrained generators as priors for image reconstruction.
